

Simple Calculator

```
#include <iostream>

using namespace std;

int main() {
    float num1, num2;
    char op;

    cout << "Enter first number: ";
    cin >> num1;

    cout << "Enter operator (+, -, *, /): ";
    cin >> op;

    cout << "Enter second number: ";
    cin >> num2;

    switch (op) {
        case '+':
            cout << "Result = " << num1 + num2;
            break;

        case '-':
            cout << "Result = " << num1 - num2;
```

break;

case '*':

cout << "Result = " << num1 * num2;

break;

case '/':

if (num2 != 0)

cout << "Result = " << num1 / num2;

else

cout << "Error: Cannot divide by zero!";

break;

default:

cout << "Invalid operator!";

}

return 0;

}
